DETAILED ACTION

This action is responsive to the communication filed 9/28/06. Claims 33-38 remain in prosecution.

Information Disclosure Statement

The IDS filed 8/24 and 9/11 of 2006 have been considered and recorded in the file.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 33-38 are rejected on the ground of nonstatutory obviousness-type

double patenting as being unpatentable over claims 1, 9, 13 of U.S. Patent No.

6,731,910. Although the conflicting claims are not identical, they are not patentably

distinct from each other because claims 1, 9 and 13 of US Patent No. 6,731,910 encompass the limitations of claims 33-38.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 33-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Qureshi et al. (US 4,004,226) submitted by Applicant in view of Baldwin et al. (US 5,204,976).

Regarding claim 35, Qureshi teaches a data receiving method of a receiver 15 (fig. 1) in use with a communication system in which a transmitter 10 adds a

Art Unit: 2618

preamble for detecting reception power intensity in a receiver side to transmission data (col. 4, lines 26-28, lines 53-54), and sends the resultant signal as a transmission signal, and the receiver side detects the reception power intensity by use of the preamble contained in the transmitted signal (col. 4, lines 54-59), the data receiving method comprising:

receiving the transmission signal in which the preamble for detecting reception power intensity in the receiver side is located preceding to the transmission data in the transmitter side and a random pattern is used for the preamble (pseudorandom sequence in the preamble, col. 4, lines 51-59); and detecting the reception power intensity by use of the preamble (the receiver detects the beginning of signal burst when energy appears on the line, the AGC can be made to settle very quickly, col. 4, lines 51-59). Qureshi only differs from the claimed invention in that the communication with the AGC is used in line modem communication. However, according to Baldwin, communication with the AGC can also be used in mobile wireless communication system (col. 2, lines 51-65). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teaching of Baldwin to the system of Qureshi so that quick AGC can also apply in the mobile wireless communication system.

Regarding claims 33-34 and 36-38, the claims are just alternate recitation of claim 35; therefore, they are interpreted and rejected for the same reason as set forth in claim 35.

Art Unit: 2618

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LEE NGUYEN whose telephone number is 571-272-7854. The examiner can normally be reached on FIRST FRIDAY OFF.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, ANDERSON D. MATTHEW can be reached on 571-272-4177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
